1

## Motivation

### Pure-Tone Audiometry (PTA):

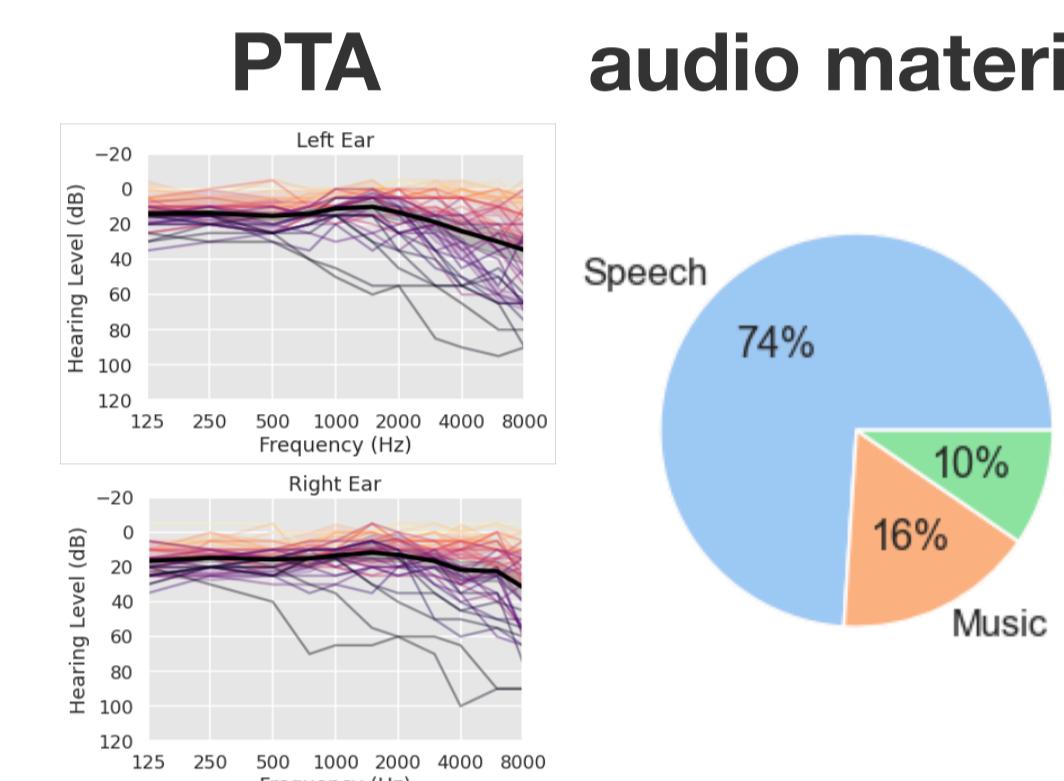

- Assesses hearing thresholds in dB using artificial pure tones (log-spaced between 125 and 8000Hz)
- Information about hearing thresholds is obtained via subjective feedback

### Problem:

- Artificial pure-tones do not reflect real-life listening situations (e.g. cocktail party)
- Supra-threshold hearing loss (i.e. hidden hearing loss) is not captured using PTA
- Subjective feedback problematic for babies or old people suffering from dementia

## Material & Methods

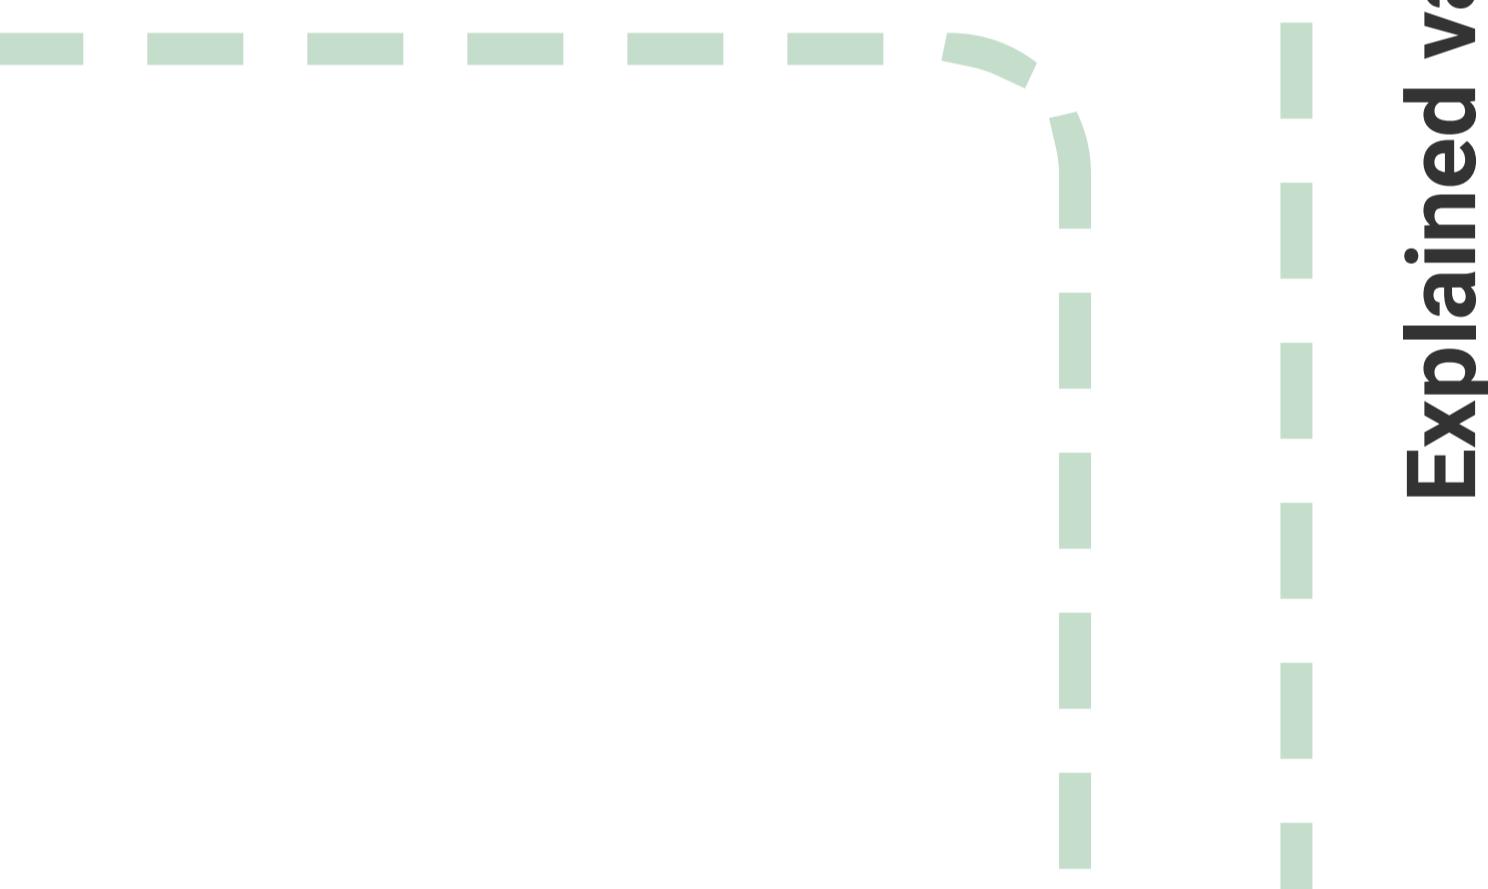

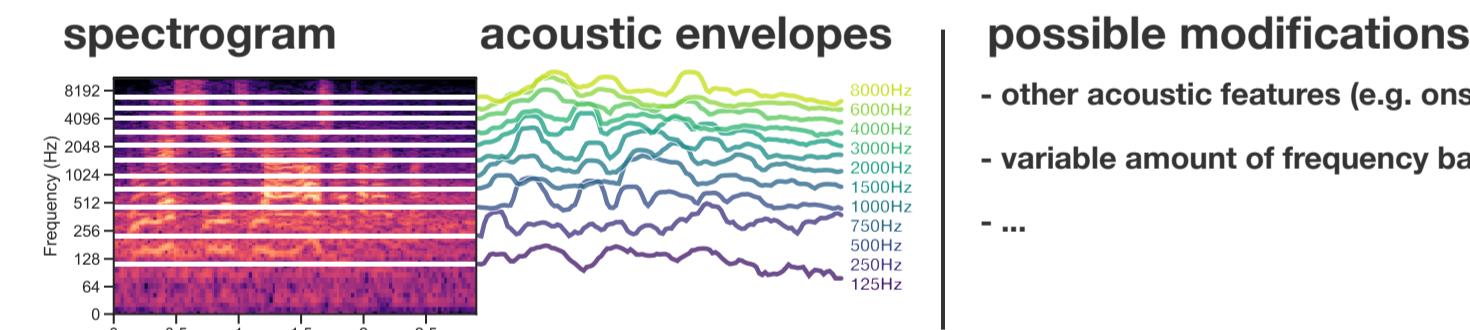

- N=42 subjects
- Age: M=47.16, SD=18.64
- Online Hearing Assessment
- Stimulus material: radio play (~20 min)
- 306 channel MEG system

2

## Analysis Procedure

### 1) Acoustic Feature Extraction

### 2) Encoding Model of acoustic features

$$STRF(\text{acoustic envelopes}, \text{EEG/MEG (measured)}) = r(\text{measured/predicted})$$

### 3) Channel selection based on subjective auditory processing abilities

$$r(\text{measured/predicted}) \sim PTA + SSQ(\text{Speech, Spatial, ...})$$

### 4) Decoding Model using selected channels for specific subjective auditory processing ability (a.k.a Neurogram/NGA)

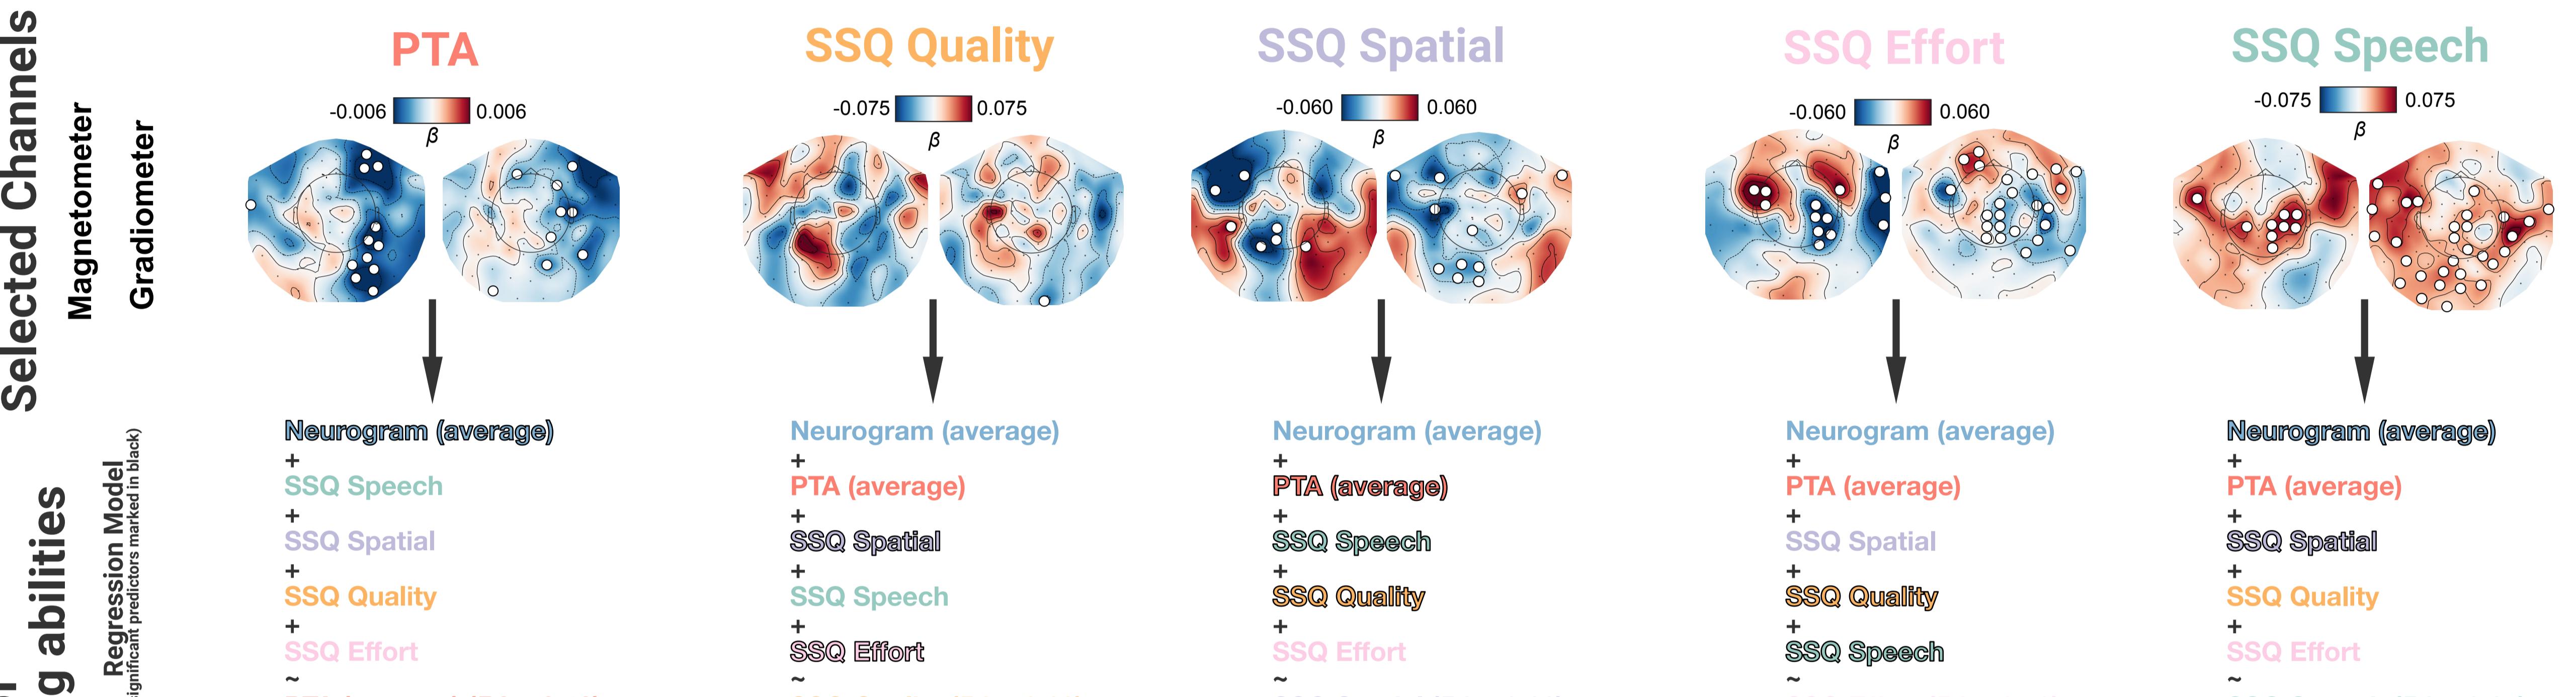

$$STRF(\text{EEG/MEG (measured)}, \text{acoustic envelopes}) = \text{Neurogram/Audiogram}$$

### 5) Predicting subjective hearing ability (e.g. SSQ Speech)

$$SSQ \text{ Speech} \sim \text{NGA} + \text{PTA} + \text{SSQ Spatial} + \text{SSQ Quality} + \text{SSQ Effort}$$

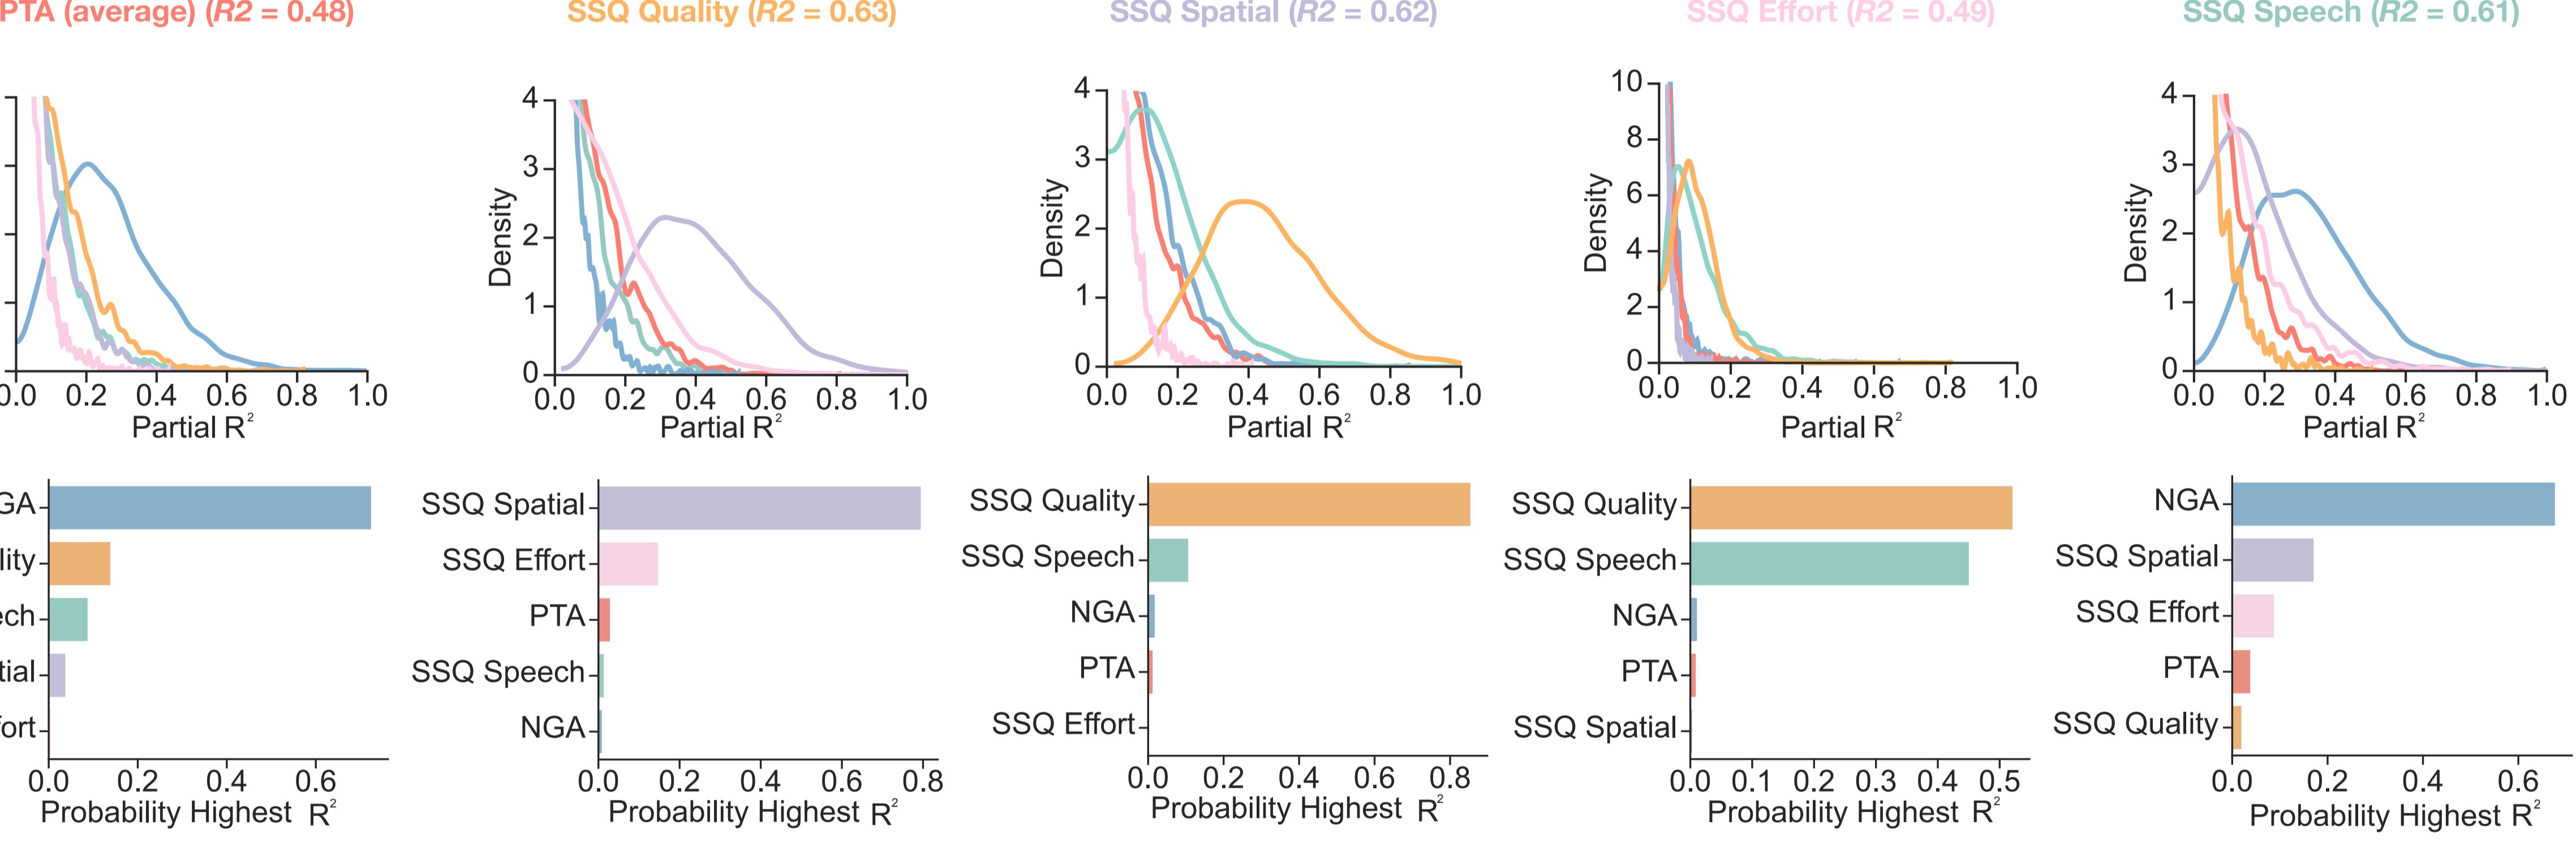

3

## Neurogram score explains most of the variance in pure-tone audiometry and subjective speech understanding

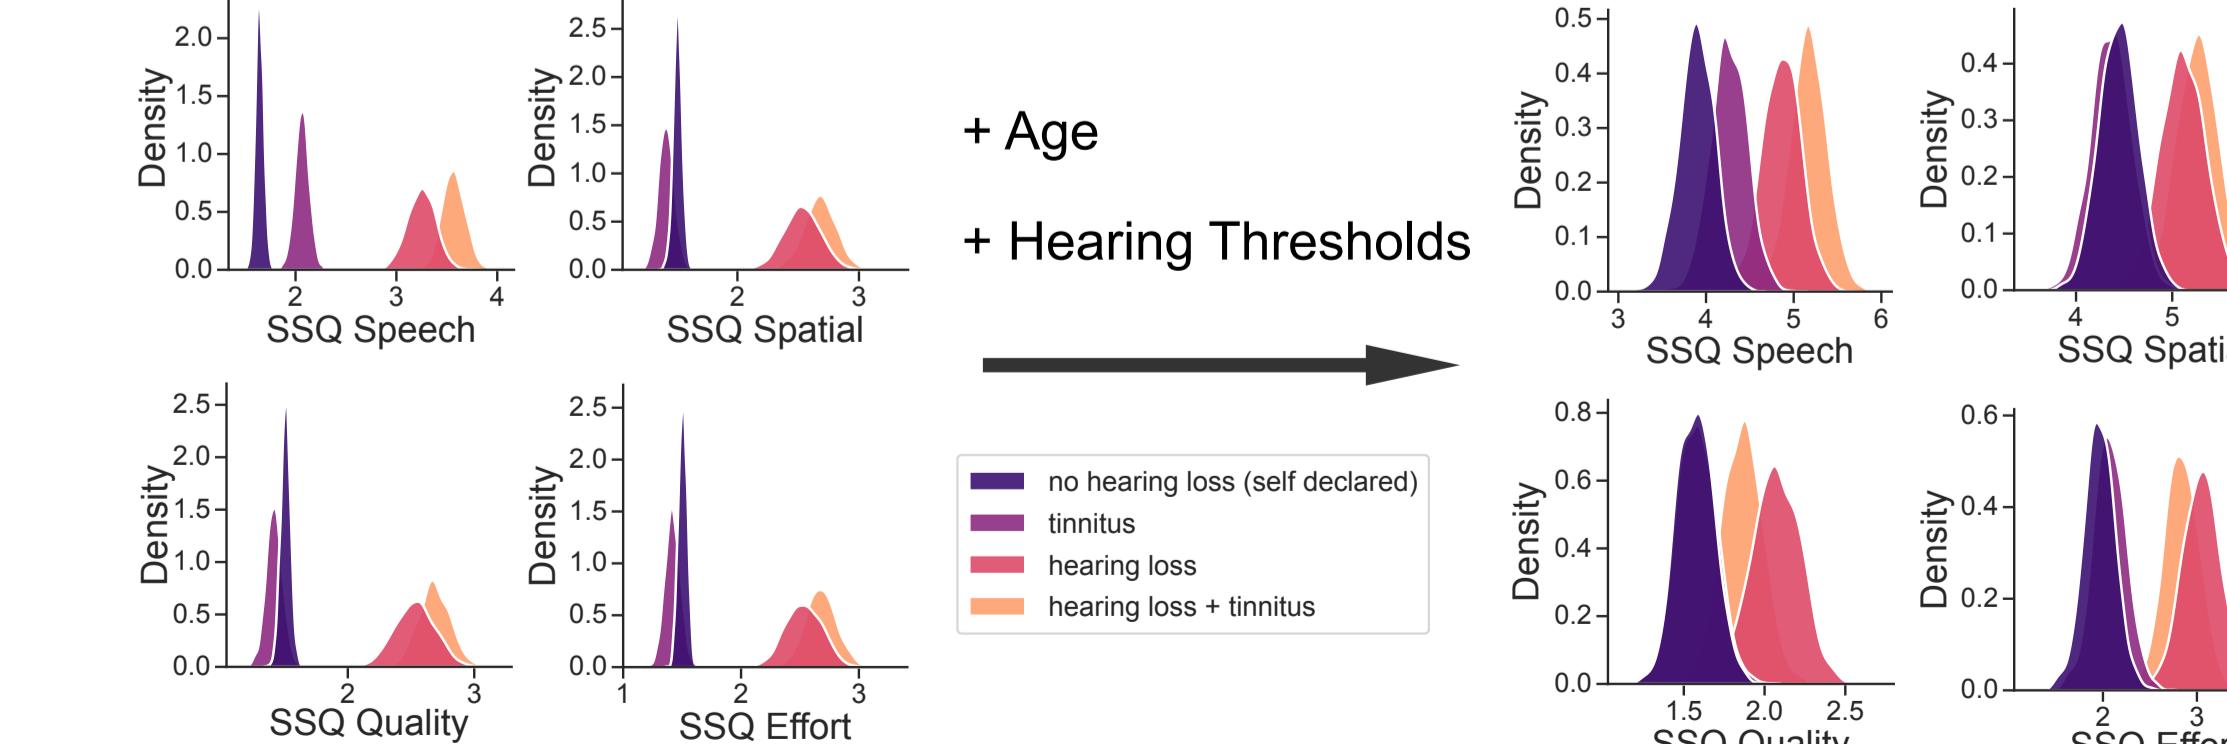

### Explained variance of subjective auditory processing abilities

Probability of a predictor explaining the most variance

4

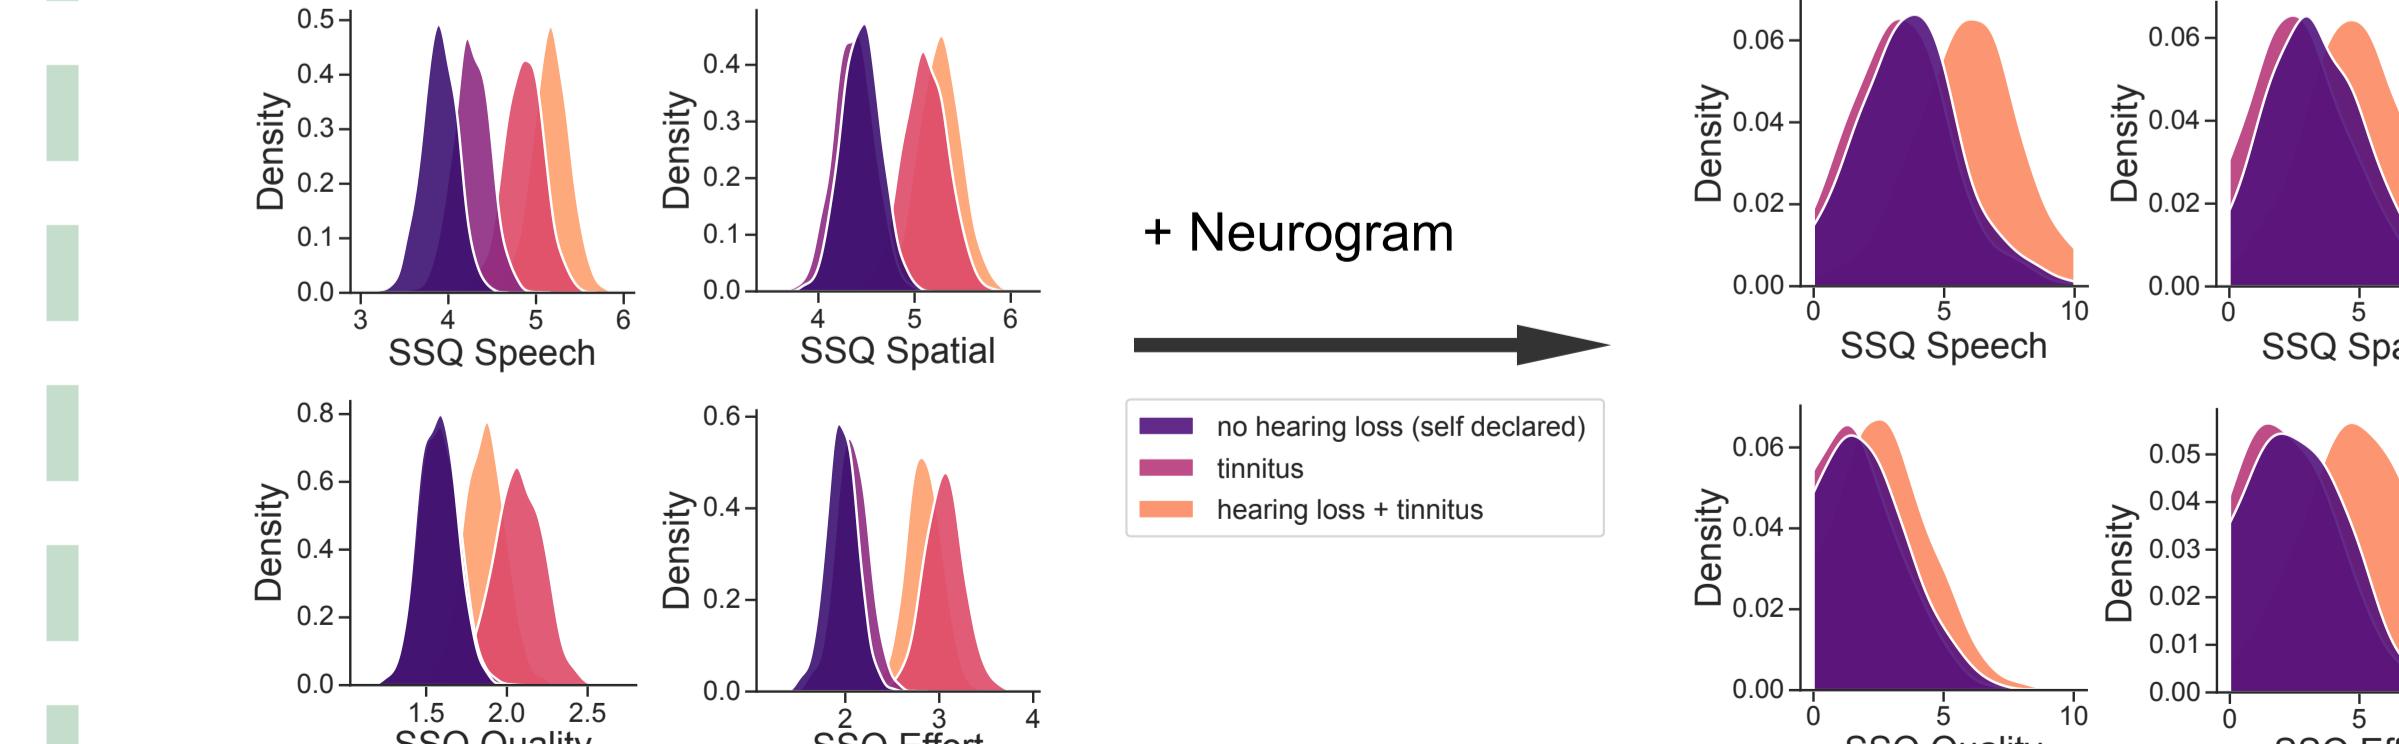

## Differences in subjective hearing reports are not explained by age and acoustic thresholds

Adding age and hearing thresholds as predictors accounts for some, but not all of the differences in subjective hearing abilities

5

## Closing the gap between "measured" and subjectively reported hearing problems

Adding Neurogram as predictor accounts for residual differences in subjective hearing abilities
